Paper Round Director

## 2020 was not the year we expected.

At the start of the pandemic, there was a feeling that environmental issues would be forgotten in the race to restart the economy once Covid restrictions were lifted. However, against a backdrop of the global climate emergency, the UK has continued working towards the country's Net Zero commitments.

### What is Net Zero?

Net Zero refers to achieving an overall balance between the amount of greenhouse gases released into the atmosphere and those taken out. This is the only way we can tackle climate change.

### Achievements to date

The UK broke records for low carbon energy in 2020, producing over 47% of electricity from renewables in Q1 and on track to be over 40% for the year. Although partly because of consumption changes driven by the pandemic, it was still a very positive achievement. Overall emissions in the UK have dropped 45% from 1990 levels.

### How we can help

At Paper Round, we are committed to help reduce the impact of climate change. This year we will receive two fully electric trucks powered using renewables, making emissions free collections. We are also launching a new reporting system which allows you to carefully track the emissions saved by recycling.
